

For shakers types EX 1060 and EX 2060

The swivelling trunnion type BF 1060 has been developed to allow a stable support for the shakers types EX 1060 and EX 2060.

It is directly installed on its rubber feet to operate at relatively high frequency and it must be securely attached for low frequency tests.

The trunnion BF 1060 is also designed to be suspended by two or four attachment points by means of high capacity tightropes or springs.
